**DETAILED ACTION**

***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- I. Spices I, directed towards figures 1-9.
- II. Spices II, directed towards figure 9-13

If applicant elects species 1, a further sub-species restriction is required between:

- i. Sub-species a, directed towards figure 2.
- ii. Sub-species b, directed towards figure 5.

and

- iii. Sub-species c, directed towards figures 6-9.
- iv. Sub-species d, directed towards figure 1-5.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Spices I corresponds to claims 3-17.

Spices II corresponds to claims 18-28.

Sub-species a, none.

Sub-species b, none.

Sub-species c, none.

The following claim(s) are generic: 1 and 2

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The special technical features of species I (figures 1-9) are the conveyer (C) and the diluter-mixer (D) that transport the soap from the reservoir to the showerhead. Species II (figures 10-13) does not include the conveyer or the diluter mixer of species I.

The special technical feature of species II (figures 10-13) is the rotating valve (11) that is rotated to either select soap or no soap. The valve includes two tracts, one that includes a Venturi to suck the soap into the water stream and the other to just bypass the soap and spray pure water. The rotatable valve (11) is not included in species I.

The special technical feature of sub-species a (figure 2) is the fact that the diluter-mixer (D) is positioned in a horizontal manor, which is not true in sub-species b.

The special technical feature of sub-species b (figure 5) is the fact that the diluter-mixer (D) is positioned in a vertical manor, which is not true in sub-species a.

The special technical feature of sub-species c (figures 6-9) is the three separate soap containers. Subspecies d has only two soap containers.

The special technical feature of sub-species d (figures 1-5) is the two separate soap containers. Sub-species c has three separate soap containers.

A telephone call was made to Benot Castel on 11/02/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
